Reopening .MX Policies

This document is an integral part of the Lineaments .MX and will be applicable during the Reopening Process of registration of Domain Names directly under .MX in what is related to the application, registration and management of the referred Domain Names; it is important to state that this document only establishes the modifications of the Domain Names General Policies of the Registry .MX during the Reopening Process; nevertheless the Domain Names General Policies of the Registry .MX will still be applicable at all times, exception made to the modifications set up in this document.

1.   Definitions.
1.1.   Origin Domain Name.
Domain Name under any of the following categories: .com.mx, .org.mx, .edu.mx, .net.mx, that grants the Registrant the ability of applying the registry of a Domain Name directly under .MX.

1.2.   Reopening Process.
Period of time during which is started the application and registration of Domain Names directly under .MX. The same is divided in three stages: Sunrise period, Quiet period and Landrush period. These periods will have specific terms and characteristics that can be modified by the Registry .MX, prior to the notice sent to the Registrars via e-mail.

1.3.   Reserved Domain Names.
Domain Names directly under .MX that are not able to be registered.

The terms referred in capital letters and without definition in this document will have the definition and meaning that was given in the Domain Names General Policies of the Registry .MX, unless that in this document were to be defined otherwise or such definition or sense were to be limited.

The terms defined in this document as in the Domain Names General Policies of Registry .MX can be used in the current document either in singular or plural sense.

All the headlines used in this document are used exclusively to facilitate the lecture of the same and should not be part of the interpretation of the same.

2.   About the Domain Names directly under .MX already existing (with date of registration prior to May 1st, 2009).
